

Sakamoto Gluteal Injection Trainer

A lateral recumbent model for injections at Clarke's point and Hochstetter's point.

- Being a lateral recumbent position, the model permits more practical training.
- The epidermis is made of a unique material that leaves no needle mark.

Hochstetter's Point

Clarke's Point

The skeletal landmarks such as the anterior superior iliac spine, posterior superior iliac spine, and greater trochanter can be felt, and the model is ideal for practicing the determination of the injection site.
