

The prostate is one of many organs available separately from our SynDaver Synthetic Human product line. If you require a custom version of this organ or one which is not listed please call us. We can build any organ (or system of organs) from CT and MRI images, CAD designs or simple drawings.

Organ Features: The prostate gland is available in several sizes and can include various pathologies (fluid filled cysts, fibrous cysts, calcified nodules, benign prostate hyperplasia). The hardness can be changed based on client specifications.

Typical Uses: These organs are used in the SynDaver Synthetic Human product line. They are also incorporated into complex model systems for manual digital exam training, radiological imaging acquisition training and device testing.

Imaging Equipment: Compatible with all known imaging equipment including ultrasound, x-ray, fluoroscopy, MRI and CT scanners.

Surgical Equipment: Compatible with all known surgical devices including needles, scalpels, lasers, RF ablation, bipolar, monopolar and harmonic devices.

Extraordinary Features: SynTissue synthetic human tissues made from salt, water and fiber—which feature the world's most realistic tactility. SynTissue synthetic human tissues match the acoustical characteristic of real human tissue.

All of our products are made in the USA.
