

## Airway Trainers

SynDaver's® Airway Trainers are realistic medical training platforms ideal for teaching the techniques associated with tracheal intubation.

With these trainers, students will be able to learn and master surgical techniques on biohazard-free material that looks, feels and behaves like live human tissue.

These models include realistic oral cavity with a hard and soft palate, tongue, uvula, epiglottis and vocal cords. The soft neck with cricoid cartilage enables users to perform Sellick's maneuver for a better view of the larynx and/or to reduce gastric reflux.

### Relevant Skills

Intubation, airway management exercises.

### Included Components

Upper torso with age-appropriate anatomy, storage case, care kit.

### Available Options

If you require custom tissues, dimensions, or modified mechanical properties, please call and ask to speak to one of our technical sales representatives.

### Packaging

Product is shipped vacuum packed inside the storage container.

### Equipment Compatibility

Endotracheal tubes, laryngoscope, nasogastric tube, nasal trumpet, Ambu bag, laser scalpels, and electrocautery.
