bozzini® Hysteroscopy Basic

The bozzini® Hysteroscopy Basic package is an affordable and portable system for hysteroscopy simulation. The basic package meets the needs of training centres and medical device companies who already possess imaging capabilities yet still want to benefit from the realistic training experience offered by the bozzini® Hysteroscopy system.

The basic package allows the end user to experience hands on “wet lab” simulation thanks to its fully irrigatable uterine models. The models are specifically designed to offer highly realistic simulation of irrigation management during hysteroscopy.

The package comes with five anatomically correct uteri that can be mounted in an anteverted or retroverted position. The uteri allow simulated vaginoscopy, visualisation of the external os, navigation of the cervical canal and visualisation of the uterine cavity and ostia. Each wetlab uterus contains 8 to 10 resectable polyps that are manufactured from a proprietary water based substrate. The polyp substrate reacts like real tissue when operated on with energy devices and morcellators making this the perfect option for demonstration and training of medical devices. The real to life tissue handling not only shows medical devices in their best light but also offers the perfect platform for affordable, high volume training with standard hysteroscopy instruments.

The bozzini® system can be used anywhere from the skills lab to a conference centre, making it a clean and portable solution for training the skills required for operative and office based hysteroscopy procedures.

Included in the package:

- Uterus retaining case and mount system
- Table clamp
- Drip tray
- 5x single use wetlab uterus models (with 8-10 polyps)
- Soft carry case

Product code: | INO-BOZ-HYST-BAS

bozzini® Hysteroscopy Basic

Anatomically correct uterus models containing 8 to 10 polyps
The uterus models are single use. Replacement models are available for purchase online or by purchase order.

Drip tray for collection of irrigation fluid
The drip tray can be secured to a table-top with the use of a G clamp which is included in the package.

Supplied with a soft padded carry case.
