

Nasco *Life/form*® Advanced Injection Belly

LF09900U Instruction Card

About the Simulator

The Advanced Injection Belly is a soft stomach replica developed by Nasco. Made from lifelike skin material, it can be pinched and then injected for a realistic learning experience. Use the straps to apply the belly to a standardized patient or simulator. With little to no maintenance required, this trainer will enhance training scenarios or patient education. The Advanced Injection Belly is made to sustain multiple punctures without showing holes. Protective backing will keep needles from passing through the simulator.

General Instructions for Use

Use for the following types/styles of injection practice:

1. Inserting and rotating the infusion set for insulin pumps
2. Pen-style injections
3. Subcutaneous injections

Note: Nasco recommends air injections only.

Care and Maintenance

Clean the Advanced Injection Belly with warm, soapy water. Lightly dry trainer and backing with paper towel. For stubborn dirt, use Nasco Cleaner (LF09919U sold separately). Apply Nasco Cleaner to the soiled area and wipe clean with a clean, dry towel.

A light dusting of baby powder will help maintain the soft, lifelike skin feeling of the simulator and prevent it from becoming tacky.

Cautions

Standard needle handling procedures should be observed when using this trainer.

Ink, ballpoint pen, certain printed papers, and plastics will leave an indelible stain when in contact with the simulator.

Actual product may vary slightly from images. Nasco reserves the right to change product color, materials, supplies, or function as needed.
