PERIODIC TABLE

The periodic table shows the arrangement of elements based on their atomic number and chemical properties. It is divided into groups and periods.

DSC031 Periodic Table

PHYSICAL UNITS

QUANTITY	NAME	SYMBOL
ENERGY	Joules	J
MOMENT	Newton-metres	Nm
FORCE	Newton	N
TIME	seconds	s
LENGTH	metres	m
AREA	square metres	m ²
VOLUME	cubic metres	m ³
MASS	kilograms	kg
DENSITY	kg per m ³	kg/m ³
FORCE	Newton	N
PRESSURE	Pascals	Pa (Nm ⁻²)
CURRENT	Amps	A
POTENTIAL DIFFERENCE	Volts	V
RESISTANCE	Ohms	Ω
TEMPERATURE	degrees Celsius	°C

Safety in the Laboratory

1. No eating or drinking in the lab.
2. Handle everything as if it could potentially cause damage.
3. Keep flammable and corrosive solutions for spurs.
4. Keep electrical equipment free from water.
5. Open spills from the outside in using paper towels.
6. Use proper safety protection gear such as goggles or gloves.
7. Never clean glassware. Use water to be sure that materials are cleaned away, for use to dry the glassware thoroughly.
8. Be careful weighing out chemicals and reagents. Do NOT return excess materials to the stock container.
9. Check all waterbaths with a thermometer before putting your hand into the water.
10. All sharp objects should be discarded in a sharps container.
11. Keep a proper laboratory notebook.
12. Wash your hands before and after lab work.

TRANSFORMATIONS

TRANSLATION

A translation moves every point on a shape the same distance in the same direction.

Shape A has been translated 4 units along the x-axis and 3 units up the y-axis. The translation A to B expressed as a vector is $\begin{pmatrix} 4 \\ 3 \end{pmatrix}$.

REFLECTION

A reflection produces a mirror image of a shape along a line of reflection.

Shape D is a reflection of shape C in the line y=x. Both shapes are the same perpendicular distance from the line of reflection.

ENLARGEMENT

To perform an enlargement two pieces of information are needed:

1. The centre of enlargement - the point from which the object is enlarged.
2. The scale factor - the size of enlargement.

Shape F is an enlargement of shape E by a scale factor of 2, centre (2, 2).

ROTATION

A rotation turns a shape about a fixed point. To perform a rotation, three details are needed:

1. The centre of rotation.
2. The angle of rotation.
3. The direction of rotation.

Shape H is a rotation of shape G 90° clockwise about (0, 2).

DMA042 Transformations

TRIGONOMETRY

Trigonometry deals with the relationship between the sides and angles of a triangle. In right-angled triangles, the following rules apply.

An easy way to remember these rules is to use the phrase:
SOH-CAH-TOA

DMA043 Trigonometry

TYPES OF TRIANGLES

DMA045 Types of Triangles

AVERAGES

DMA047 Averages

TRIGONOMETRY FOR ALL TRIANGLES

Labelling the triangle is vital:

Side 'a' is opposite angle 'A'
Side 'b' is opposite angle 'B'
Side 'c' is opposite angle 'C'

Given three sides and one angle, or two sides and one angle, or two angles and one side, you can find the other three sides and angles.

The sine rule for any triangle is:

$$\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C}$$

To find an unknown side, use the sine rule (if you know two angles and one side, or two sides and one angle).

Remember if you know 2 angles of a triangle, you can find the third.

The cosine rule for any triangle is:

$$a^2 = b^2 + c^2 - 2bc \cos A$$

The standard for calculating the area of a triangle is:

$$Area = \frac{1}{2} ab \sin C$$

Always the side and angle must be opposite.
